Cat Net

- **Weatherproof and UV resistant**
- **Hard-wearing**
- **Mesh size: 3 x 3 cm**
- **Includes fixing materials**

Assembly instructions for cat net

1. Check that the net is the right size for your requirements. Spread the net so that the individual meshes are square in shape. The corners of the cat net are marked with coloured string. Please note that the net should not be taut. It should sag slightly so that your cat cannot climb on it.
Cut the net to the required size. Leave at least 1 cm around the knots so that they do not unravel.
2. Drill the holes for the hooks in the wall and along the balcony railings. You can also fasten the net to the railings with rope (not included).
Insert the hooks at regular, not too wide intervals so that your cat cannot slip in under the net.
If you are not able to drill holes you can also use rods with clamps (available at zooplus).
3. Thread the tension rope through the first row of stitches on the net. This will give it more stability.
4. Hang the net onto the hooks. Tighten the tension of the rope and knot both ends of the rope.
Please note: The net should sag slightly to prevent your cat climbing around on it.

Important:

- **Do not leave your cat unattended when near the cat net.**
- If your cat bites holes in the net, please mend or put a new net up.
- The transparent net reacts to changes in temperature. If it becomes wavy in the summer please do not adjust or tighten it because it will shrink back again in the winter.
