

Instructions of Use

TetraAqua® AlguMin

Safe Algae Control

- Mild, biological algae control
- With humic matter as a natural anti-algae treatment

For all freshwater aquariums

Biological algae control

Due to the high levels of humic matter, TetraAqua® AlguMin biologically prevents the formation of unattractive algae. AlguMin promotes the biological balance and healthy plant growth.

How AlguMin works

- Due to its natural basis, AlguMin acts in a mild, biological and lasting manner against commonly occurring species of algae.
- It contains highly effective active substances that work against algae. Humic matter induces a useful black water effect (light reduction) and in this way an inhibition of algae growth.
- Harmless to fish, plants and micro-organisms.
- Its liquid form allows a rapid and even distribution of active substances in the aquarium.

Easy application

5 ml for every 10 litres of aquarium water (1 subdivision on the measuring scale represents 10 ml).

- Before and after treatment, as many algae as possible should be mechanically removed using e.g. a fishing net, since dying algae deteriorate water quality.
- If required the treatment can be repeated after 3-4 weeks.
- Shake vigorously before use! Keep out of sunlight.
- Algae controlling substances require aeration during treatment in order to ensure an adequate oxygen supply.

Keep out of reach of children!
