

eSHA-2000 Instruction Manual

Dosage:

eSHA-2000 may be used as a remedy, for disinfecting and for quarantine.

To extract drops, turn the bottle upside down and press the clear pipette (20 drops = 1 ml).

Standard dosage:

First day: 25 drops per 100 litres of water

Second day: 12 drops per 100 litres of water

Third day: 12 drops per 100 litres of water

If symptoms persist treatment may be repeated for several days. Double standard dosage in soft water.

Dosage for clipping (for fast suppression of symptoms):

First day: 50 drops per 100 litres of water

Second day: 25 drops per 100 litres of water

Third day: 12 drops per 100 litres of water

If symptoms persist treatment may be repeated for several days (12 drops).

Dosage for prevention/quarantine:

A single application of 25 drops per 100 litres of water

In serious cases the dose rate may be doubled or increased (refer to text above). Shake and warm up to 40/60°C before use if there is condensation in the bottle.
